## Executive summary of California Community Colleges

- With low tuition and a longstanding policy of full and open access, the CCCs are designed around a remarkable idea: that higher education should be available to everyone.
- The CCCs are equally remarkable for their versatility. They are the state's primary entry point into collegiate degree programs, the primary system for delivering career technical education and workforce training, a major provider of adult education, apprenticeship, and English as a Second Language courses, and a source of lifelong learning opportunities for California's diverse communities.
- The CCCs have made significant strides in the last five years through sustained reform efforts in the areas of student success, transfer, and career technical education. The colleges are now well-poised to build on this success and accelerate the pace of improvement.

## Mendocino College Mission

- Mendocino College partners with a dynamic community of diverse students to help them achieve their educational goals. Informed by research, reflection and dialogue, the College offers programs in Basic Skills, Transfer Preparation and Career and Technical Education as well as Workforce Improvement. The College demonstrates its commitment to student success through highquality and innovative instruction, providing individual attention to student needs in an inclusive and accessible learning environment. Mendocino College embraces its role as an intellectual, economic and cultural anchor for the region.

## History of California Community Colleges

- In 1907, the California State Legislature, seeing a benefit to society in education beyond high school but realizing the load could not be carried by existing colleges, authorized the state's high schools to create "junior colleges" to offer what were termed "postgraduate courses of study" similar to the courses offered in just the first two years of university studies.
- In 1921, California passed legislation which allowed for the creation of community college districts. In September 1921, Modesto Junior College (the 16th oldest community college) became the first ever community college district. That launched the current model of community colleges that continued to offer trade studies such as mechanical and industrial arts but now included general education.

## Building Talent

Strategies to Address the Talent Shortage

| Strategy | Tactic | Considerations/Questions |
| :---: | :---: | :---: |
| Build the Talent Supply | Alignment with local high schools, middle schools: presentations, internships, job shadowing | What is the brand of your industry, your organization within this group? How can you stay connected beyond the initial encounters? |
| Find New Access to a Talent Supply | Veteran focus | Identify the local military liaison organizations in your community. How can you help veterans map their skills on to your jobs? Could you do this "live" as well? |
|  | Underrepresented population focus | Women, people of varied ethnic/racial backgrounds, disabled people may be great sources of talent. Again, try to identify organizations that connect with these groups. |
|  | Local community <br> or technical college partnership | These institutions can serve as a source of visibility and talent. In addition, might the school integrate apprenticeships with your organization into certain courses of study or use your senior employees as lecturers? |
| Determine Find vs Build aka Teachable Fit | Aptitude vs. Experience | Pull apart key jobs and determine which skills must walk in the door, which you can train and how you'll close the gap. Involve senior employees in the conversation. |
| Mitigate the Demand for New Talent | Knowledge transfer | Have active programs for logging and passing on key knowledge. This can engage existing talent and help bolster the knowledge of current but more junior employees. |
|  | Onboarding programs | Onboarding isn't just the first day or week. Having a multi-month program to get new hires up to speed can help retain good talent and get them up the performance "S-curve" faster. |
|  | Succession management | Sudden departures can cause a scramble to bring in identical talent. Identifying successors, and their knowledge/skill gaps, can bolster the skills and engagement of existing talent. |
|  | Retention programs | Having a fully fleshed out retention program is important for your entire workforce, but particularly those individuals you don't want to lose. What are their key motivators? |
|  | Flexible work models | Flexibility, in terms of hours, location (on-site vs remote/at home) and duties can be attractive to both senior and junior employees. In addition, temporary workers can help address spikes in demand, providing additional workforce flexibility. |
|  | Training and development | Most employees want to see progression in their skills and most candidates want to work for an organization that actively assists in that progression. What are your core programs? Do your employees know about them? Do you highlight employees who have applied their learnings and expanded their careers with you? |

## Employment and Workforce

 Trends2016-2017
Manpower Talent Shortage Survey

## The HARDEST SKILLS to find

For the fifth consecutive year, Skilled Trades positions are the hardest to fill globally; IT roles jumped seven places to second position
IT Staff
(developers, and
programmers, database
administrators and IT
leaders and managers)

## Skills Gap

WHY employers say it's HARD TO FILL positions
Lack of available applicants and hard skills are the top reasons
employers can't fill positions

"Today, nearly 11 million Americans are unemployed. Yet, at the same time, 4 million jobs sit unfilled. This is the "skills gap"-the gulf between the skills job seekers currently have and the skills employers need to fill their open positions."
"Closing the Skills Gap", JAMIE DIMON and MARLENE SELTZER, January 05, 2014
